Dashboard

Building an Analytics Dashboard in Zoho Creator

Department of Computer Science and Engineering

Student Name: Sangamithra Arun

Roll No: 240701465

Application Name: College Library Management System

Objective

To design and configure a Dashboard page in Zoho Creator for the College Library Management System using Panel, Chart, and Report elements to display summary values, fine analysis, member-wise distribution, and transaction records on a single page.

Introduction

A Dashboard in Zoho Creator is a dedicated page created using the built-in Dashboard Builder. It combines different visual components such as panels, charts, gauges, and embedded reports, which can be connected to one or more forms. Each component can be added and configured separately without writing code. This allows important figures, patterns, and records to be viewed easily from a single page instead of accessing individual reports separately.

Dashboard Elements Used

Element	Configuration	Purpose
Panel (summary tile)	Display data: Sum; Form: Issue Transaction; Field: Fine Amount	Displays the Total Fine Amount as one aggregated value
Panel (summary tile group)	Four tiles: Total Fine Amounts and three additional aggregate totals	Provides quick-access summary totals at the top of the dashboard
Chart (bar)	Form: Issue Transaction; X-axis: Member ID (label Member); Y-axis: Sum of Fine Amount	Represents the fine amount for each member using a horizontal bar chart
Chart (bar)	X-axis: Member; Y-axis: Count of Member	Displays the distribution of issue transactions among members

Element	Configuration	Purpose
Report (embedded)	Report: All Issue Transactions; Add/Edit/Delete/Duplicate actions enabled; Search enabled	Shows the transaction records and allows them to be managed from the dashboard
Panel (Fine Type / Quick Links)	Count aggregates for Lost, Overdue, Damages, and Total; shortcut links for adding records	Provides a breakdown of fines by type and quick access to create new records

Table 5.1: Elements configured in the College Library Management System Dashboard.

Observation

The dashboard successfully combines information from the **Book Inventory, Member Profile, Issue Transaction, and Fine Record** forms into one centralized page. The dashboard uses pre-built **Panel, Chart, and Report** components that can be configured through their Display, Style, and Action settings.

No custom programming was required to calculate the **Total Fine Amounts**, member-wise distribution, or fine-type counts. Each panel and chart obtains its values directly from the selected form and field using aggregate functions such as **Sum** and **Count**.

This demonstrates that Zoho Creator allows the presentation of summarized information to be separated from the underlying data storage and calculations. As a result, an interactive and informative dashboard can be created visually with minimal configuration.

Result

A Dashboard for the **College Library Management System** was successfully designed and published in Zoho Creator. The dashboard includes summary panels, a fine-analysis chart, a member-wise distribution chart, and an embedded transaction report. All the configured elements

were verified to display the required live data correctly.

5.2 Illustrative Form Design (Dashboard View)
